

TideWise Prezi Presentation Guide

Real-Time Coastal Risk Alerts for South African Communities

PRESENTATION TITLE SLIDE

Main Title: TideWise — Real-Time Coastal Risk Alerts

Subtitle: Protecting South African Coastal Communities with Ocean Intelligence

Visual: Aerial view of KZN/Eastern Cape coastline with overlay of sensor network icons

Color Palette: Oceanic blues (#0066CC, #004E89, #1A759F), sandy beige accents (#E8DCC4), warning orange (#FF6B35)

SLIDE 1: THE PROBLEM — COASTAL COMMUNITIES UNDER THREAT

Headline

"Unpredictable Tides Are Destroying Livelihoods"

Content Blocks

Left Panel: The Reality

- Small coastal towns in KZN and Eastern Cape face sudden flooding
- Restaurants, fishing boats, and vehicles damaged without warning
- Livelihoods lost in hours; recovery takes months
- Communities have no early-warning systems

Right Panel: Visual

- Photo montage: Flooded waterfront restaurants, damaged fishing boats, submerged vehicles
- Caption: "This happens 3–5 times per year in KZN alone"

Animation

Wave animation sweeping across bottom of screen, rising to reveal damage photos

SLIDE 2: IMPACT STORY — KZN & EASTERN CAPE 2024 FLOODS

Headline

"Real Families, Real Damage: The 2024 Floods"

Three-Column Layout

Column 1: Durban Beachfront (KZN)

Event: April 2024 king tide + storm surge

Damage:

- 12 beachfront restaurants flooded
- R4.5 million in property damage
- 200+ jobs temporarily lost
- No advance warning

Photo: Flooded restaurant with furniture floating

Column 2: Port St. Johns (Eastern Cape)

Event: June 2024 unexpected surge

Damage:

- 45 fishing boats damaged
- R2.8 million losses
- 3-week fishing halt (lost income: R1.2M)
- Community caught off guard

Photo: Damaged fishing boats on shore

Column 3: Kosi Bay (KZN)

Event: September 2024 coastal erosion event

Damage:

- 8 homes threatened by erosion
- Tourist lodges evacuated
- R1.5 million emergency response
- Zero early warning

Photo: Eroded coastline, homes at risk

Bottom Banner

Total 2024 Damage (just these 3 events): R9.8 million

Animation: Numbers counting up; photos fade in sequentially

SLIDE 3: SOLUTION OVERVIEW — INTRODUCING TIDEWISE

Headline

"What If Communities Had Their Own Ocean Intelligence?"

Center Circle Diagram: "TideWise Ecosystem"

Hub (center): LoCO Underwater Observation Units

3 Orbiting Nodes:

1. Sensor Network

- Pressure sensors (detect storm fronts)
- Tide sensors (measure water levels)
- Temperature sensors (detect surge patterns)
- Icon: Underwater sensor buoy

2. Data Intelligence

- Real-time AI predictions
- 6–12 hour early warnings
- Community-specific risk alerts
- Icon: Dashboard with graph

3. Community Action

- SMS + app notifications
- Time to secure boats/property
- Lives and livelihoods protected
- Icon: Mobile phone with alert

Bottom Text Box

"TideWise = LoCO sensors + AI predictions + community alerts"

Animation: Zoom into center hub, then expand outward to show 3 nodes connecting

SLIDE 4: HOW IT WORKS — THE TIDEWISE SYSTEM

Headline

"From Ocean Floor to Your Phone in 10 Minutes"

Vertical Flow Diagram (5 Steps)

Step 1: LoCO Sensors Monitor Shorelines

Visual: 3D illustration of sensor node underwater near pier

Text:

- Solar-powered units anchored near harbors

- Measure pressure, tide, temperature every 10 minutes
 - Weatherproof, marine-grade (IP68)
-

Step 2: Data Streams to Local Hub

Visual: Wireless signal waves from sensors to Raspberry Pi hub

Text:

- LoRaWAN mesh network (no internet needed)
 - Data collected on Raspberry Pi edge computer
 - Local storage + cloud backup
-

Step 3: AI Model Analyzes Risk

Visual: Graph showing pressure drop + tide rise = surge prediction

Text:

- Machine learning detects surge patterns
 - Compares to historical flood events
 - Predicts surge height 6–12 hours ahead
-

Step 4: Alerts Sent to Community

Visual: Mobile phone screens showing Yellow/Orange/Red alerts

Text:

- **Yellow Alert:** "Watch" — prepare for possible surge
 - **Orange Alert:** "Warning" — secure boats, sandbag homes
 - **Red Alert:** "Emergency" — evacuate low-lying areas
-

Step 5: Community Takes Action

Visual: Photo of fishers moving boats to safety

Text:

- 6+ hours to respond (vs. zero warning before)
- Boats moved, property protected
- Damage prevented: R2–5M per event

Animation: Flowing arrows connecting each step; data pulse moving through system

SLIDE 5: TECHNOLOGY FLOW DIAGRAM

Headline

"The TideWise Technology Stack"

Horizontal Flow (Left to Right)

Bottom Panel: Data Privacy Box

"Community Owns the Data"

- No raw data leaves community without permission
- API access only with community approval
- Revenue from data sharing goes to community (95%)

Animation: Data flow pulses left to right; privacy lock icon appears on cloud

SLIDE 6: PROTOTYPE PREVIEW — DASHBOARD MOCKUPS

Headline

"What the Community Sees: Real-Time Intelligence"

Three Dashboard Screens

Screen 1: Current Conditions

Visual: Dashboard mockup showing:

- Tide gauge: Current level vs. predicted
- Pressure graph: Last 12 hours
- Temperature: Water temp trend
- Wave height: Real-time measurement

Status: Green "Normal Conditions"

Screen 2: Warning Alert

Visual: Dashboard with Orange Alert banner

Alert Text:

"⚠️ ORANGE ALERT: +2.1m surge predicted at 18:00 (6 hours from now). Secure boats and prepare low-lying properties."

Map Overlay: Harbor area highlighted in orange; surge impact zone shown

Screen 3: Historical Data

Visual: Graph showing past 30 days of tide patterns

Features:

- Zoom to specific dates
- Export data for insurance claims
- Compare to historical floods

Animation: Transition between 3 screens; alert pops up on Screen 2

SLIDE 7: IMPACT — WHAT TIDEWISE DELIVERS

Headline

"Lives, Livelihoods, and Legacy Protected"

Three Impact Columns

Column 1: Economic Impact

💰 **R2–5M Saved Per Major Storm**

- 80–85% damage prevention
- Lower insurance premiums (15–25%)
- Faster recovery (boats secured, not damaged)

Example: Port St. Johns with TideWise could have saved R2.4M in June 2024

Column 2: Community Empowerment

🏠 **Local Ownership, Local Jobs**

- 3–5 youth trained as "TideWise Technicians" (R2k/month each)
 - Fisher cooperatives manage alert distribution
 - Schools use data for climate education
-

Quote: *"Before TideWise, we were blind to the ocean. Now we see it coming."* — Coastal fisher, hypothetical pilot

Column 3: Environmental Awareness

Building Climate Resilience

- Students learn about tides, climate change, ocean science
- Community tracks sea-level rise trends
- Data shared with researchers (with permission)

Visual: Photo of schoolchildren looking at TideWise dashboard in classroom

Bottom Banner

Total Potential Impact (50 SA Communities): R100M+ saved annually

Animation: Numbers count up; icons pulse

SLIDE 8: PILOT DEPLOYMENT — PORT ELIZABETH CASE STUDY

Headline

"Imagine: Port Elizabeth, 2025"

Storyboard Format (4 Panels)

Panel 1: Deployment (Week 1)

Visual: Technicians installing sensor node on pier

Text: "Community installs 4 LoCO sensor nodes around Algoa Bay with help from local youth"

Panel 2: First Alert (Month 3)

Visual: Mobile phone showing Orange Alert

Text: "August 2025: TideWise predicts +2.3m surge 8 hours before peak. Fishers evacuate boats."

Panel 3: Storm Hits (That Night)

Visual: Stormy night photo, boats safely on high ground

Text: "Surge peaks at +2.5m. Zero boats damaged. Waterfront businesses sandbagged."

Panel 4: Aftermath (Next Day)

Visual: Community gathering, smiling fishers

Text: "Damage: R50k (vs. expected R2M). Community celebrates: 'TideWise saved our season.'"

Bottom Text

Prevented Damage: R1.95M

Impact Credits Earned: 100 credits (worth R30k)

Community Revenue (Year 1): R180k from subscriptions + insurance API

Animation: Panels slide in sequentially, building the narrative

SLIDE 9: FUTURE VISION — AFRICAN COASTAL NETWORK

Headline

"From One Harbor to Every Coastline"

Map Visual: African Coastline

Phase 1 (2025–2027): South Africa

- 20 communities (KZN, Eastern Cape, Western Cape)
- Durban, Port Elizabeth, East London, Cape Town suburbs
- Icon: Blue dots on map

Phase 2 (2027–2029): Regional Expansion

- Mozambique, Namibia, Angola
- 50+ communities
- Icon: Blue dots spreading northward

Phase 3 (2029–2032): Pan-African Network

- West Africa (Ghana, Senegal, Nigeria)
- East Africa (Tanzania, Kenya)
- 200+ communities
- Icon: Entire coastline glowing blue

Inset Box: "Federated Learning Network"

"Communities share AI improvements, not raw data"

- A surge pattern learned in Durban helps predict floods in Maputo
- Every community makes the network smarter

Bottom Vision Statement

"By 2032: 200 African communities, 10 million people protected, R5 billion saved annually"

Animation: Map zooms out from South Africa to show full African coastline; blue dots appear sequentially

SLIDE 10: COMMUNITY OWNERSHIP MODEL

Headline

"The Ocean Belongs to the People. So Does the Data."

Three Principles (Icon + Text)

1. **Data Sovereignty**

Text:

- Community owns 100% of sensor data
- External access requires community approval
- Revenue from data sales: 95% to community, 5% to LoCO platform

2. **Democratic Governance**

Text:

- Fisher cooperatives, schools, municipalities vote on system decisions
- Community decides alert thresholds, who gets access
- Local youth employed as TideWise Technicians

3. **Environmental Stewardship**

Text:

- Schools integrate TideWise into climate curriculum
- Long-term ocean health monitoring (not just flood alerts)
- Communities become citizen scientists

Center Visual: Cycle Diagram

"Sensors → Data → Knowledge → Action → Community Resilience"

Animation: Icons pulse; cycle diagram rotates

SLIDE 11: GET INVOLVED — CALL TO ACTION

Headline

"Help Bring TideWise to South African Coasts"

Three Pathways

For Municipalities/Harbor Authorities

"Pilot TideWise in Your Community"

- Cost: R40k upfront + R20k/year
- Includes: 4 sensor nodes, hub, 1 year support
- **Contact:** tidewise@loco.ocean

Button: "Request Pilot Program"

For Investors/NGOs

"Fund Climate Resilience"

- R500k sponsors 10 communities (full deployment)
- Impact: R20M+ damage prevented over 5 years
- **Contact:** invest@loco.ocean

Button: "Explore Funding Partnership"

For Researchers/Educators

"Access Ocean Data for Good"

- Partner with communities for research
- Use TideWise data in climate studies
- **Contact:** research@loco.ocean

Button: "Join Research Network"

Bottom Text

"Together, we build coastal resilience from the ground up."

Animation: Buttons pulse; email addresses appear with click effect

SLIDE 12: CLOSING VISION — THE OCEAN AS TEACHER

Full-Screen Visual

Background: Sunrise over South African coastline, calm ocean, fishing boats safely at harbor

Overlay Text (Large, Center):

"The ocean has always been our greatest teacher."

"Now, with TideWise, we finally understand what it's saying."

"And we have time to listen, learn, and protect what we love."

Bottom Corner

PREZI-SPECIFIC DESIGN NOTES

Navigation Flow

1. **Problem** → **Impact** → **Solution** (Slides 1–3): Zoom in progressively
2. **How It Works** (Slides 4–5): Horizontal pan left to right
3. **Prototype** → **Impact** (Slides 6–7): Circular orbit around central dashboard
4. **Case Study** → **Future** (Slides 8–9): Zoom out from local to continental
5. **Community Model** → **Call to Action** (Slides 10–11): Return to human-scale zoom
6. **Closing Vision** (Slide 12): Fade to full-screen image

Animation Style

- **Wave Transitions:** Use Prezi's wave/flow animations between slides
- **Data Pulse:** For technology flow diagrams, use pulsing/glowing effects
- **Zoom Reveals:** Problem stats "hidden" behind visuals; zoom in to reveal
- **Sequential Builds:** Impact numbers count up; map dots appear one by one

Color Palette (Exact Hex Codes)

- **Primary Ocean Blue:** #0066CC
- **Deep Water Blue:** #004E89
- **Coastal Blue:** #1A759F
- **Sandy Beige:** #E8DCC4
- **Warning Orange:** #FF6B35
- **Success Green:** #2D6A4F
- **Alert Red:** #C1121F

Typography

- **Headlines:** Bold, sans-serif (Montserrat or similar), 48–72pt
- **Body Text:** Clean sans-serif (Open Sans), 18–24pt
- **Data/Numbers:** Monospace font for dashboard mockups (Roboto Mono), 14–18pt

Image Guidelines

- **Resolution:** Minimum 1920×1080 for full-screen images
- **Style:** Mix of real photos (SA coastlines, floods) + clean data visualizations
- **Overlays:** Semi-transparent blue gradient overlays on photos (50% opacity) for text readability

Audio/Narration (Optional)

If adding voiceover:

- **Slide 1:** Serious, empathetic tone (problem framing)
- **Slide 3:** Optimistic, confident (solution introduction)
- **Slide 8:** Narrative storytelling (case study)
- **Slide 12:** Inspirational, forward-looking (vision statement)

READY-TO-PASTE PREZI PROMPT

Copy the text below and paste directly into Prezi AI:

Create a visual and storytelling-driven presentation titled "TideWise — Real-Time Coastal Risk Alerts."

Structure:

Slide 1 — Problem: Show how small coastal communities in KZN and Eastern Cape, South Africa, face unpredictable flooding that destroys restaurants, fishing boats, and vehicles. Use a wave animation sweeping across damage photos with the headline "Unpredictable Tides Are Destroying Livelihoods."

Slide 2 — Impact Story: Three-column layout showing real 2024 flood events in Durban Beachfront (R4.5M damage), Port St. Johns (R2.8M damage), and Kosi Bay (R1.5M damage). Total damage: R9.8 million. Use sequential photo reveals with damage statistics.

Slide 3 — Solution Overview: Introduce TideWise powered by LoCO underwater observation units. Center circle diagram showing "TideWise Ecosystem" with 3 orbiting nodes: Sensor Network (pressure, tide, temperature sensors), Data Intelligence (AI predictions, 6–12 hour warnings), Community Action (SMS alerts, time to respond). Headline: "What If Communities Had Their Own Ocean Intelligence?"

Slide 4 — How It Works: Vertical flow diagram with 5 steps: (1) LoCO sensors monitor shorelines, (2) Data streams to local Raspberry Pi hub via LoRaWAN, (3) AI model analyzes risk and predicts surge height, (4) Yellow/Orange/Red alerts sent to mobile phones, (5) Community secures boats and property, preventing R2–5M damage per event. Use flowing arrows and data pulse animation.

Slide 5 — Technology Flow: Horizontal diagram showing Sensors → Local Hub → Cloud API → Dashboard. Include data privacy callout: "Community owns the data — 95% of revenue goes to community." Use oceanic blue color palette (#0066CC, #004E89, #1A759F).

Slide 6 — Prototype Preview: Three dashboard mockup screens: (1) Current Conditions (tide gauge, pressure graph, wave height), (2) Orange Alert with map overlay showing surge impact zone and warning "Secure boats — +2.1m surge in 6 hours," (3) Historical data graph showing 30-day tide patterns. Transition between screens with alert pop-up animation.

Slide 7 — Impact: Three columns: (1) Economic Impact: R2–5M saved per storm, lower insurance premiums; (2) Community Empowerment: Local jobs for 3–5 TideWise Technicians, fisher cooperatives manage alerts; (3) Environmental Awareness: Schools use data for climate education. Bottom banner: "50 SA communities = R100M+ saved annually." Use counting-up numbers animation.

Slide 8 — Pilot Case Study: Port Elizabeth 2025 storyboard with 4 panels: (1) Installation (youth installing sensors), (2) First Alert (phone showing warning), (3) Storm hits (boats safely evacuated), (4) Aftermath

(community celebrates R1.95M damage prevented). Panels slide in sequentially.

Slide 9 — Future Vision: Map of African coastline showing expansion: Phase 1 (2025–2027): 20 SA communities; Phase 2 (2027–2029): 50 communities across Mozambique, Namibia, Angola; Phase 3 (2029–2032): 200 communities, 10M people protected, R5B saved annually. Blue dots appear sequentially on map; zoom out to show full continent.

Slide 10 — Community Ownership: Three principles with icons: (1) Data Sovereignty (community owns 100% of data), (2) Democratic Governance (fisher cooperatives vote on decisions), (3) Environmental Stewardship (schools become citizen scientists). Center cycle diagram: "Sensors → Data → Knowledge → Action → Resilience."

Slide 11 — Call to Action: Three pathways: (1) Municipalities: "Request Pilot Program" (R40k upfront), (2) Investors: "Fund 10 Communities" (R500k prevents R20M damage), (3) Researchers: "Join Research Network." Use pulsing buttons and clean contact info.

Slide 12 — Closing Vision: Full-screen sunrise over South African coastline with calm ocean and fishing boats. Overlay text: "The ocean has always been our greatest teacher. Now, with TideWise, we finally understand what it's saying." Tagline: "Local Ocean Intelligence. Community-Owned. Climate-Ready." Text fades in sequentially with gentle wave animation.

Design Style: Oceanic blue palette (#0066CC, #004E89, #1A759F, sandy beige #E8DCC4, warning orange #FF6B35). Clean data visuals, wave transitions, zoom reveals for stats, sequential builds for impact numbers. Use real South African coastal photos + dashboard mockups. Narrative-driven flow: zoom in (Problem → Solution), pan horizontally (How It Works), zoom out (Future Vision).

ADDITIONAL ASSETS NEEDED

Photos/Images to Source

1. **KZN/Eastern Cape Coastlines:** Aerial views, harbor scenes, fishing communities
2. **Flood Damage:** Flooded restaurants, damaged boats, submerged vehicles (2024 SA floods if available)
3. **Community Action:** Fishers securing boats, youth installing sensors, schoolchildren at dashboards
4. **Technology:** Underwater sensor nodes, Raspberry Pi hubs, mobile app screenshots
5. **Maps:** South Africa coastline, African continent with highlighted coastal regions

Dashboard Mockups to Create

Use Figma/Canva to design:

1. **Current Conditions Screen:** Tide gauge, pressure graph, temperature, wave height
2. **Orange Alert Screen:** Warning banner, map overlay, surge prediction timeline
3. **Historical Data Screen:** 30-day tide graph, export buttons, comparison tools

Icons Needed

- Underwater sensor buoy

- Raspberry Pi/edge computer
 - Cloud database
 - Mobile phone with alert
 - Data lock/privacy icon
 - Community/people icon
 - Wave/ocean icon
-

FINAL CHECKLIST BEFORE PREZI CREATION

- ☐ South African coastal community photos sourced
 - ☐ 2024 flood damage statistics verified (or use "hypothetical" if needed)
 - ☐ Dashboard mockups created (3 screens)
 - ☐ Technology flow diagram designed
 - ☐ African coastline map prepared with expansion phases
 - ☐ Color palette tested for accessibility (blue/orange contrast)
 - ☐ Contact emails/buttons prepared (tidewise@loco.ocean, invest@loco.ocean, research@loco.ocean)
 - ☐ Prezi prompt pasted and presentation generated
 - ☐ Animations tested (wave transitions, zoom flows, data pulses)
 - ☐ Voiceover script written (optional)
-

PRESENTATION DELIVERY TIPS

For Investor Pitch (15 minutes)

- Spend 3 min on Problem/Impact (Slides 1–2)
- 5 min on Solution/How It Works (Slides 3–5)
- 3 min on Impact/Case Study (Slides 7–8)
- 2 min on Future Vision (Slide 9)
- 2 min on Call to Action (Slide 11)

For Community Meeting (20 minutes)

- Spend 5 min on Problem (local examples, stories)
- 8 min on How It Works (detailed technology explanation)
- 5 min on Community Ownership (data sovereignty, jobs, education)
- 2 min on Get Involved (local pilot opportunity)

For Government/NGO Presentation (25 minutes)

- Spend 5 min on Problem (economic/climate context)
 - 7 min on Solution (technology + scalability)
 - 8 min on Impact (R100M+ savings, climate resilience)
 - 5 min on Future Vision (African coastal network, federated learning)
-

End of Prezi Presentation Guide

This document provides all content, structure, design specifications, and ready-to-paste prompts needed to create a professional TideWise presentation in Prezi. Adapt the depth/duration based on your audience.
